INTRODUCTION

The ATM Management System is a mini-project developed as part of our university assignment to demonstrate the implementation of a simple yet functional banking application. This project utilizes Java for the frontend development, providing a Graphical User Interface (GUI) for users, and integrates with PHPMyAdmin as the backend database management system.

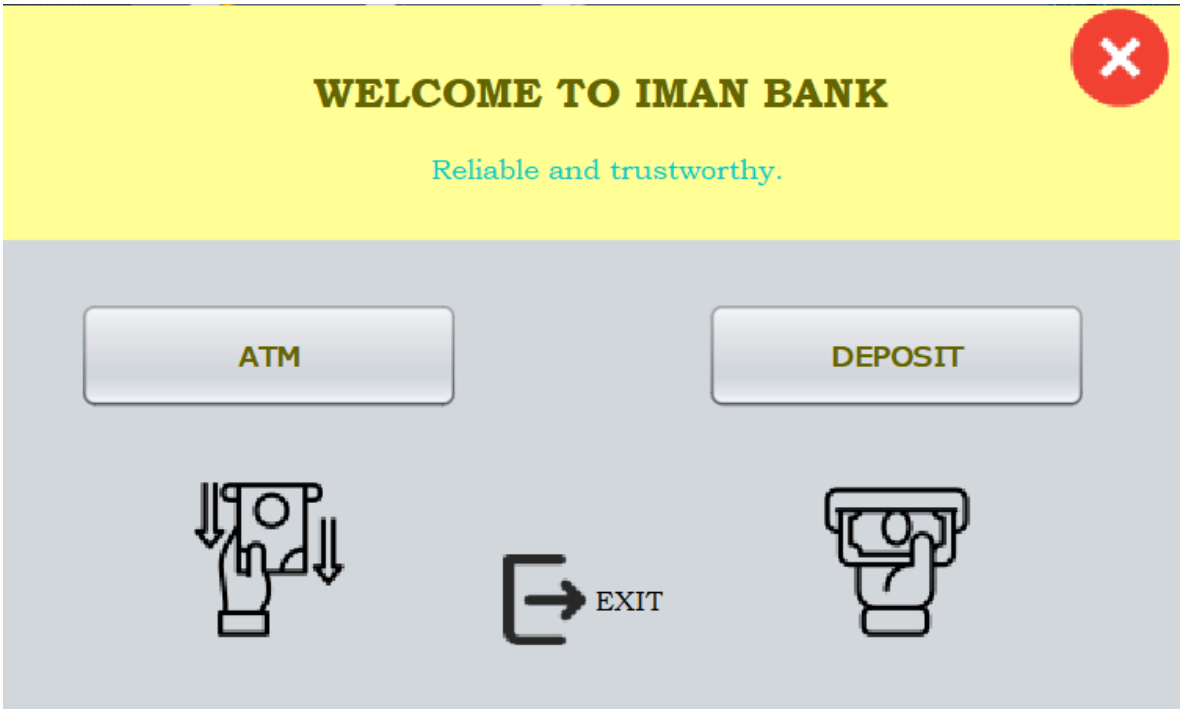
The primary objectives of this mini-project are to create a user-friendly interface for basic banking operations such as account management and transaction handling. Secondly, to implement secure authentication and data storage using PHPMyAdmin for database management. Lastly, to showcase the application of Java in developing a functional GUI for a real-world application.

To summarize, our ATM Management System mini-project aims to provide a basic demonstration of a banking application using Java with GUI and PHPMyAdmin. It serves as an educational tool to understand the fundamentals of building a simple yet functional system for managing banking operations.

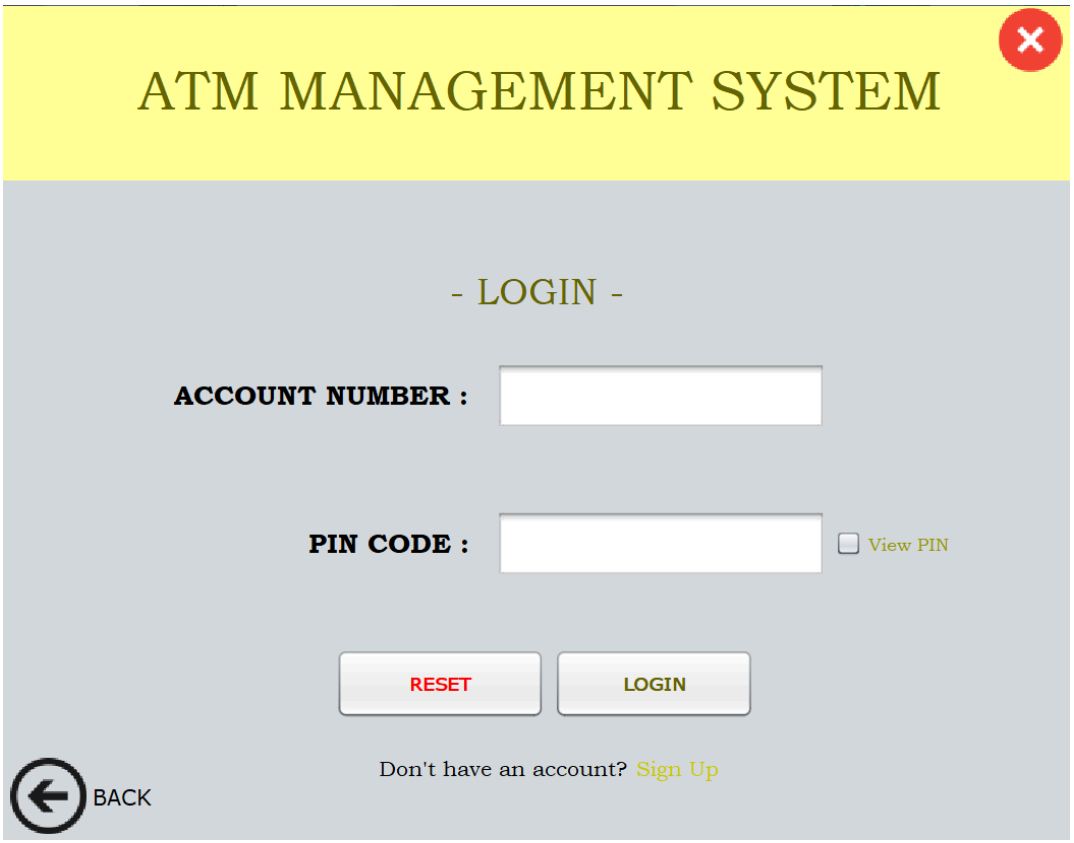
APPLICATION USER MANUAL

1. This is the first interface of the bank management system after we run the codes.

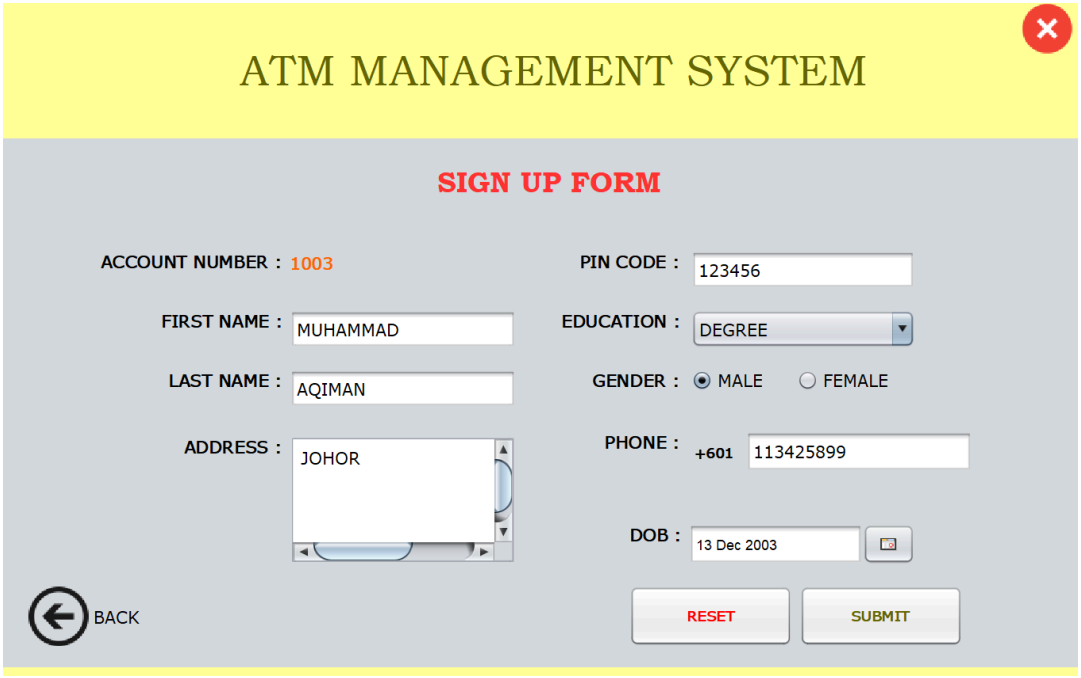
2. This is the main page of the bank. Users can choose either they want to choose an ATM or Deposit.



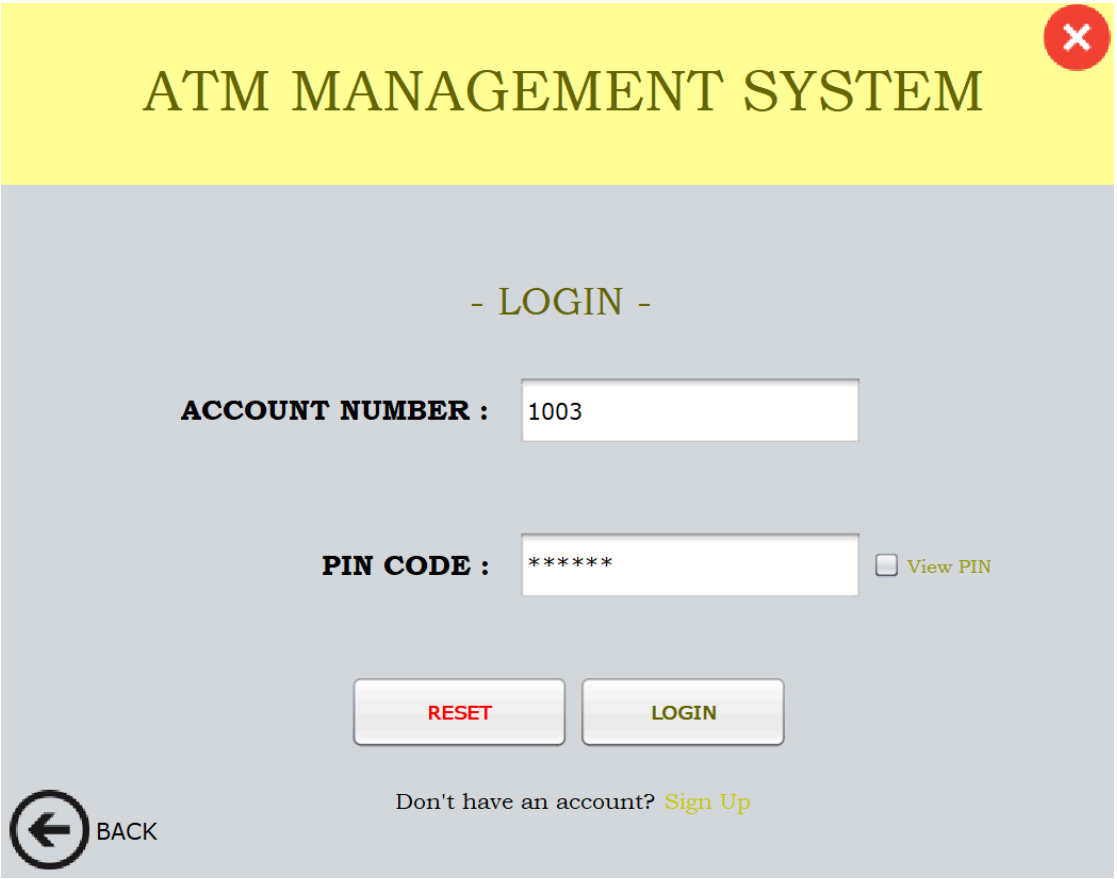
3. Users need to enter their account number and the PIN code to continue their transaction. For the new user, they need to sign up first.



4. This is an example of the complete sign-up form for the new user that must be completed and submitted.

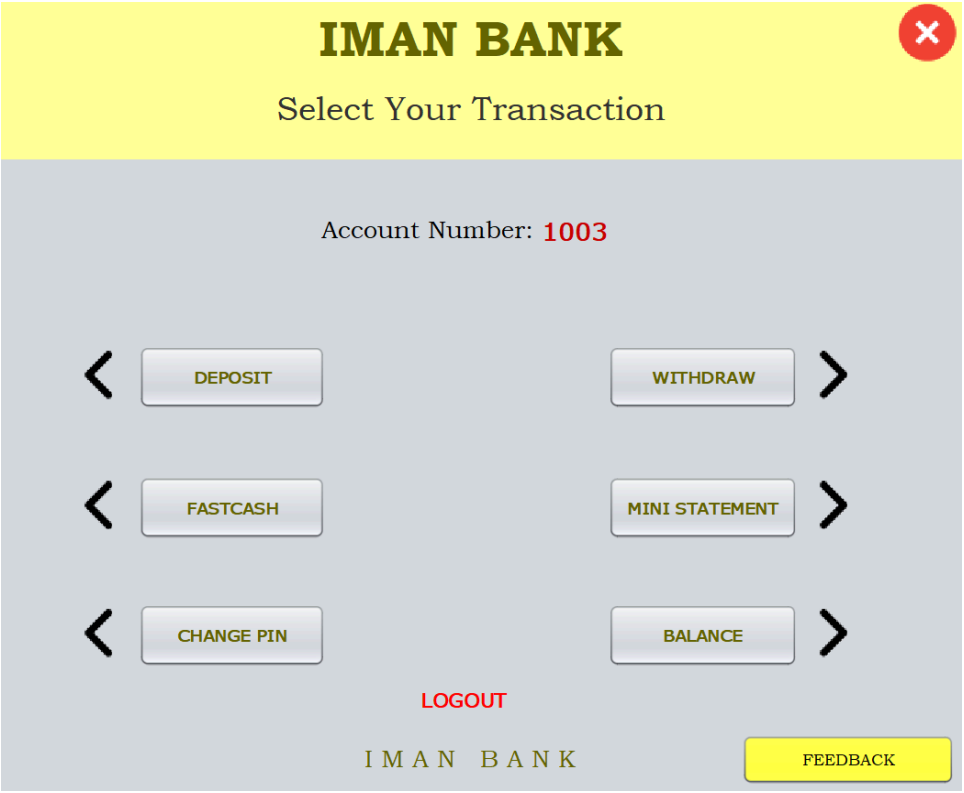


5. Users need to enter their account number and the PIN code to log in to the system. They also can view their PIN by clicking the **“View PIN”** box.



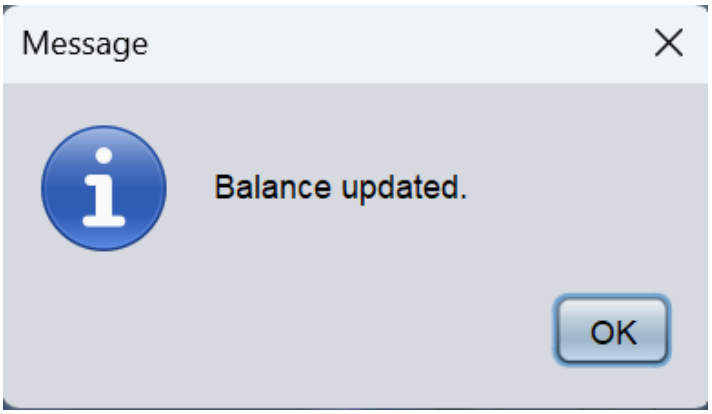
6. After login, the user will see this interface. It will appear as the user's first name.

7. The ATM will display a main menu with options such as "Withdrawal", "Deposit", "Balance", "Fast Cash", "Mini Statement", and "Change Pin".

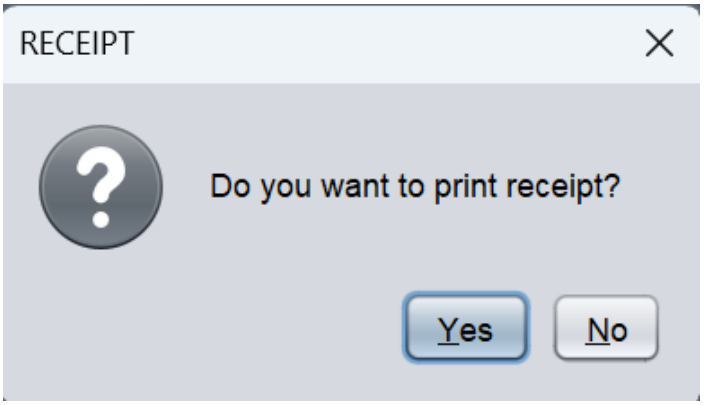


8. Inside the Deposit section, the user can enter the amount that they want to deposit. (Minimum deposit amount limit is RM10, maximum deposit amount limit is RM10,000)

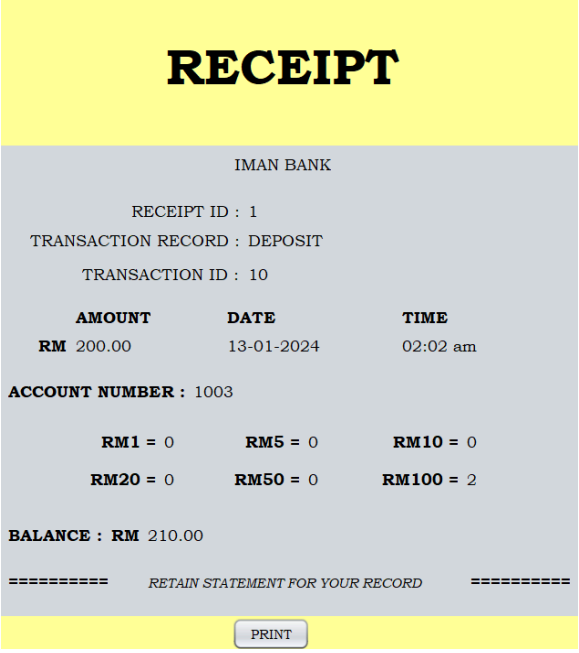
9. The user can see this pop-up after finishing the deposit.



10. After the pop-up **“Balance updated”** is shown, users can choose whether they want to print the receipt or not.



11. This is the example receipt of a deposit transaction.



RECEIPT

IMAN BANK

RECEIPT ID : 1
TRANSACTION RECORD : DEPOSIT
TRANSACTION ID : 10

AMOUNT	DATE	TIME
RM 200.00	13-01-2024	02:02 am

ACCOUNT NUMBER : 1003

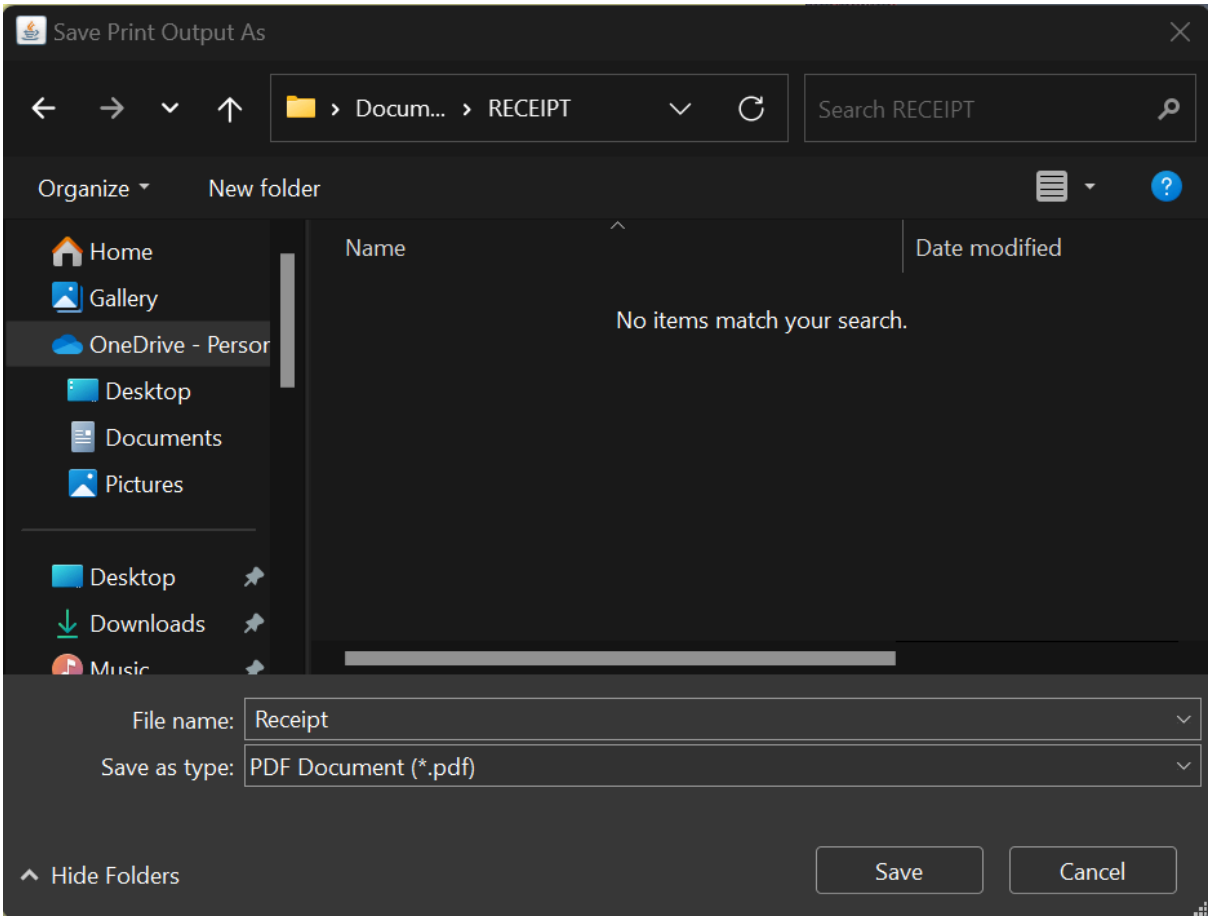
RM1 = 0	**RM5** = 0	**RM10** = 0
RM20 = 0	**RM50** = 0	**RM100** = 2

BALANCE : RM 210.00

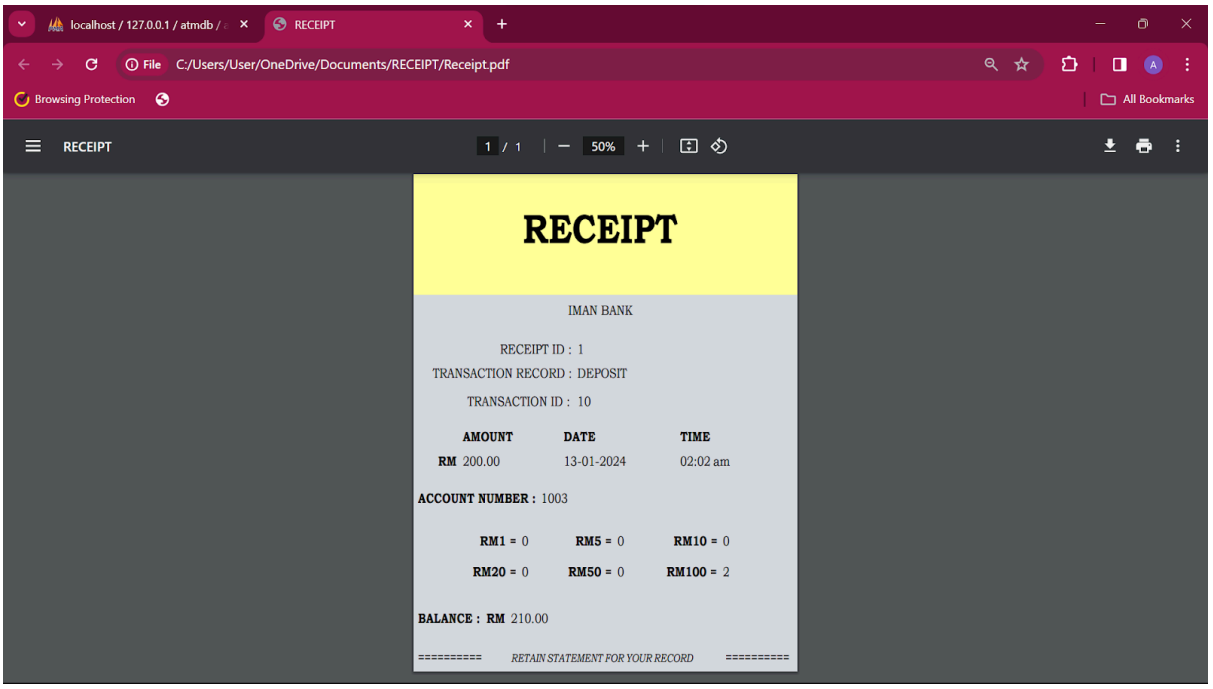
========== *RETAIN STATEMENT FOR YOUR RECORD* ==========

PRINT

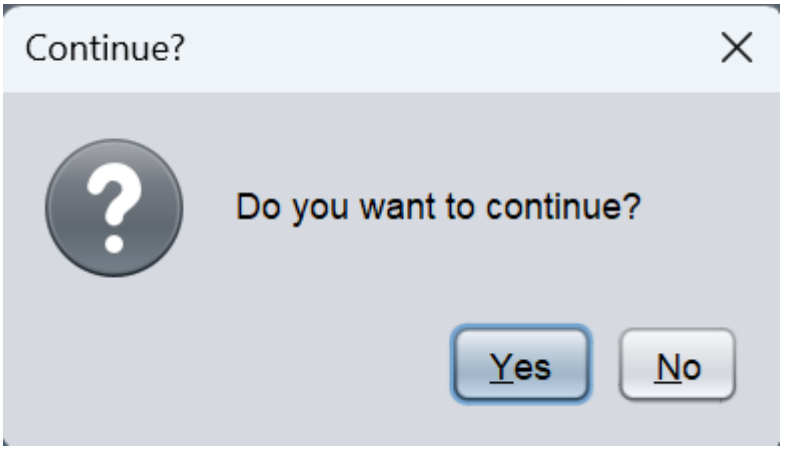
12. Users can also save the receipt as a pdf.



13. This is the example pdf of a deposit transaction that had been saved.



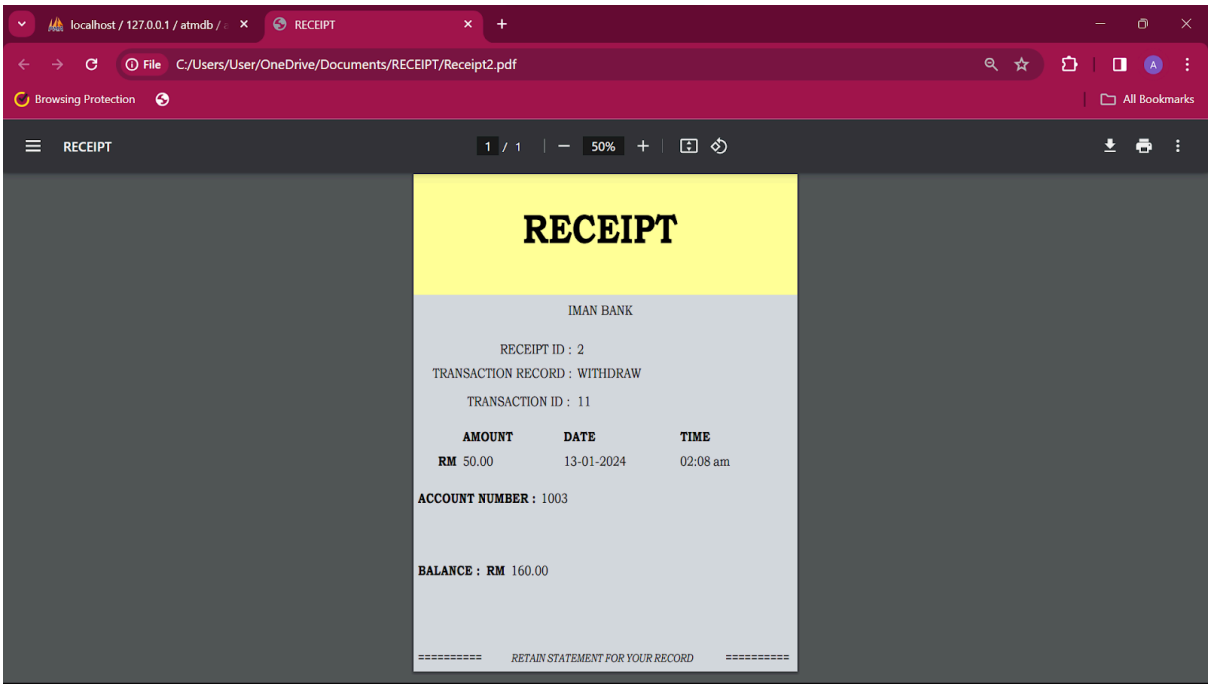
14. Users can choose if they want to continue their transaction or not. (If yes, the program will go to the main menu. Otherwise, the program will be logged out.)



15. In the Withdraw section, users need to enter the amount that they want to withdraw. (Minimum withdraw amount limit is RM 10, maximum withdraw amount limit is RM 3000)

16. This is the example receipt of the withdrawal transaction.

17. This is the example pdf of a withdrawal transaction that had been saved.



18. In the Fast Cash section, users can quickly withdraw their money.

19. This is the example receipt of the withdrawal transaction when the button **"RM 80"** is clicked.

RECEIPT

IMAN BANK

RECEIPT ID : 3

TRANSACTION RECORD : WITHDRAW

TRANSACTION ID : 12

AMOUNT	DATE	TIME
RM 80.00	13-01-2024	02:11 am

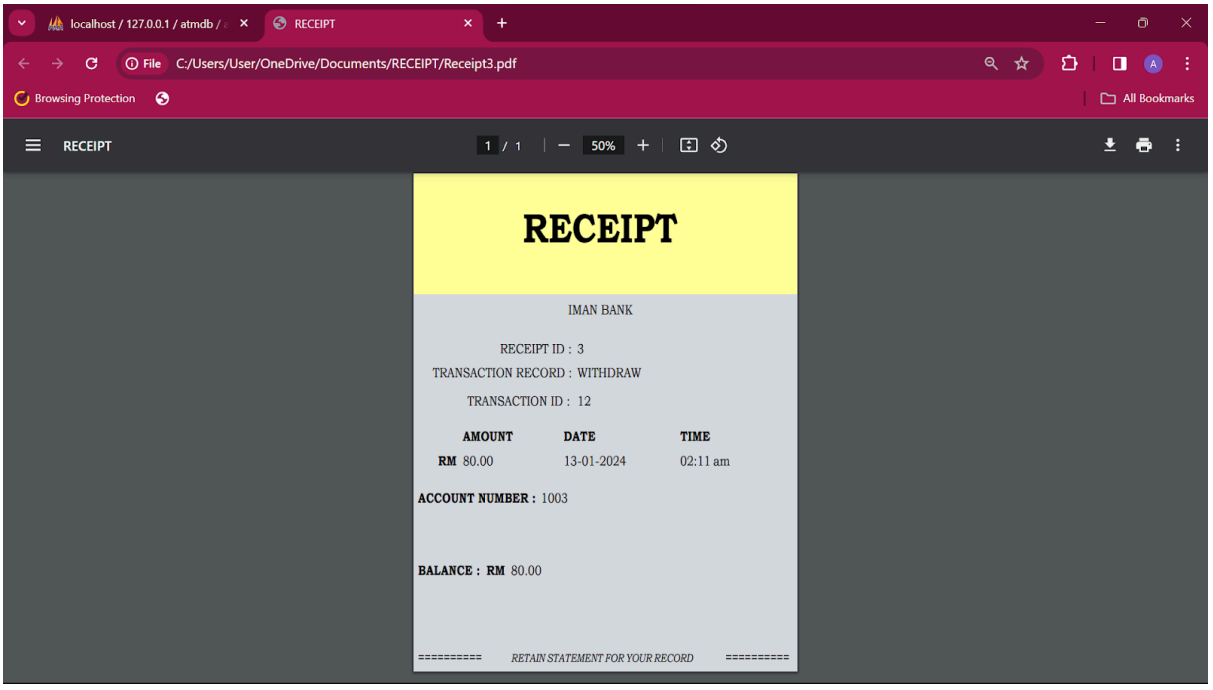
ACCOUNT NUMBER : 1003

BALANCE : RM 80.00

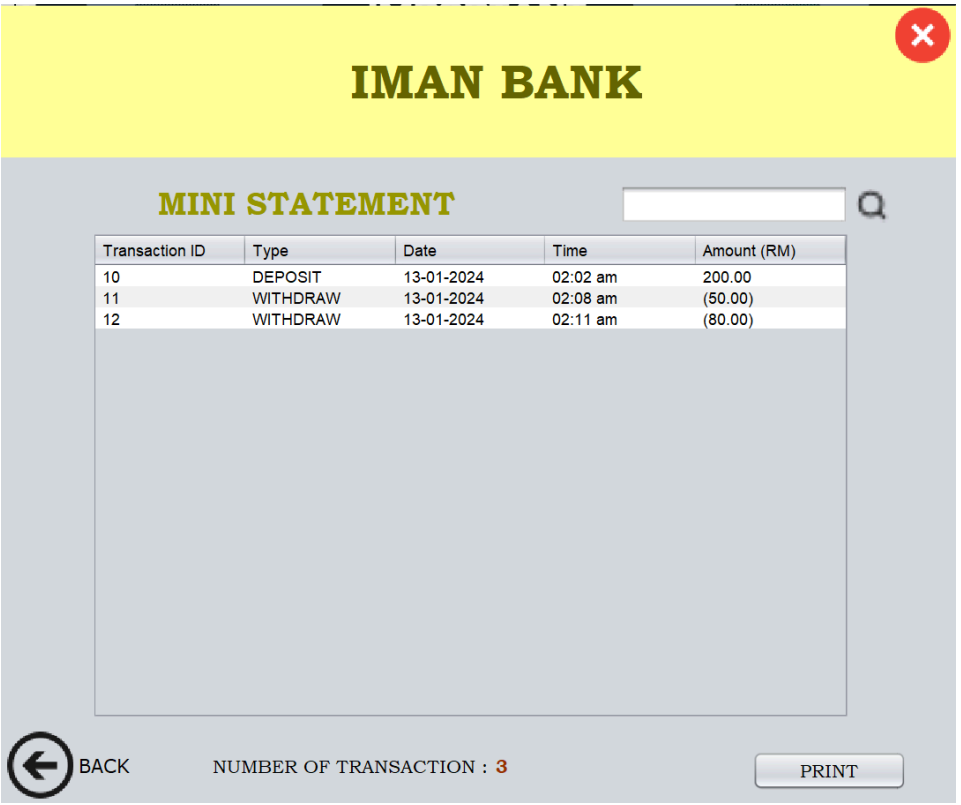
========== *RETAIN STATEMENT FOR YOUR RECORD* ==========

PRINT

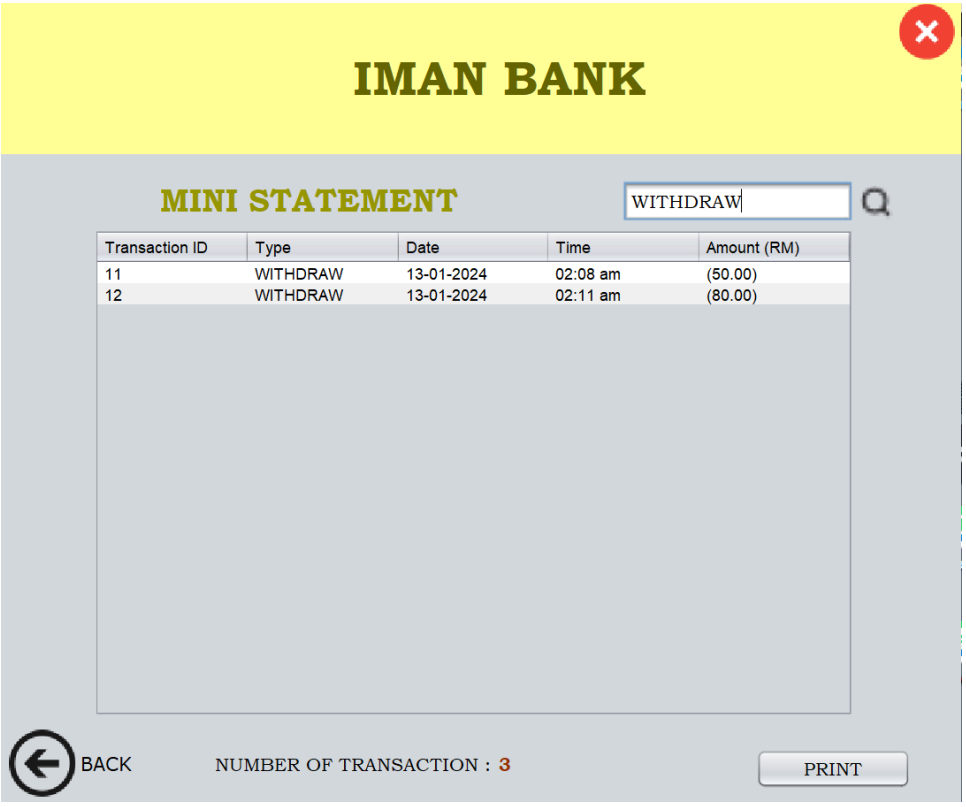
20. This is the example pdf of a Fast Cash transaction that had been saved.



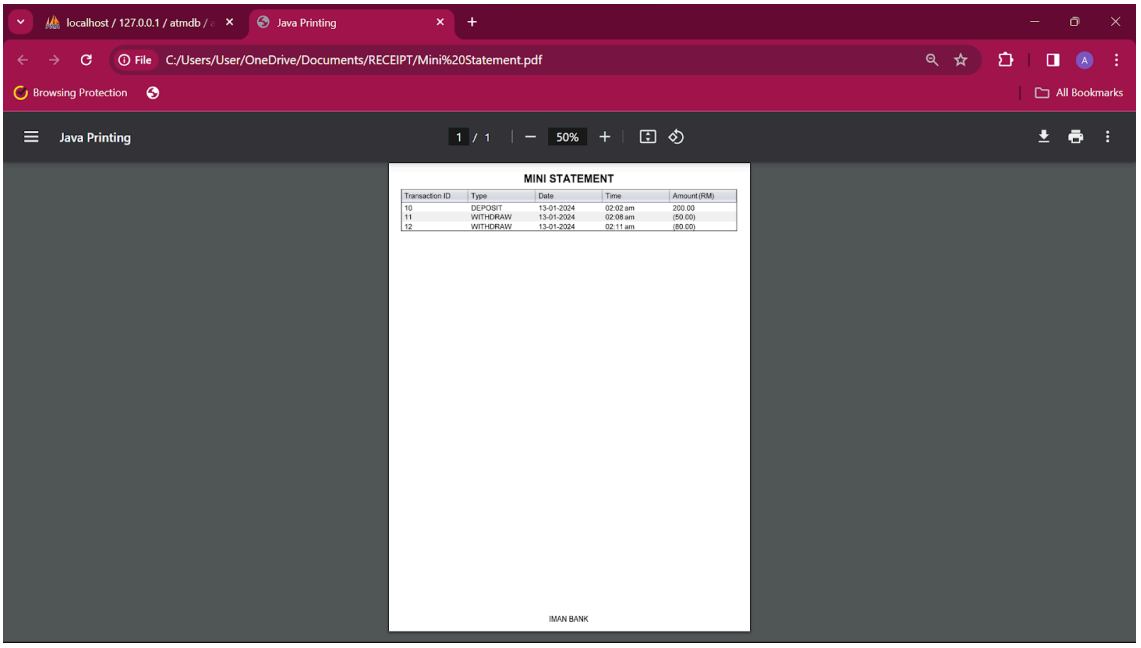
21. In the Mini Statement section, users can see the mini statement that contains the transaction history that had been done. (already filtered based on acc logged in).



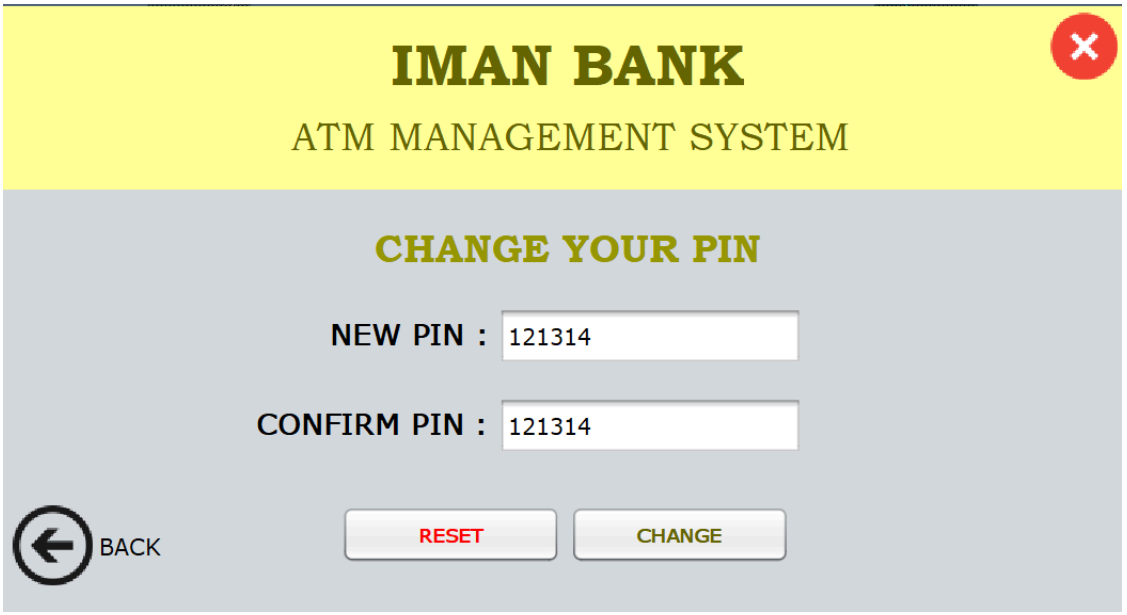
22. Users can sort the display of mini statements by specifying the type of transaction, transaction ID, date, time, or amount.



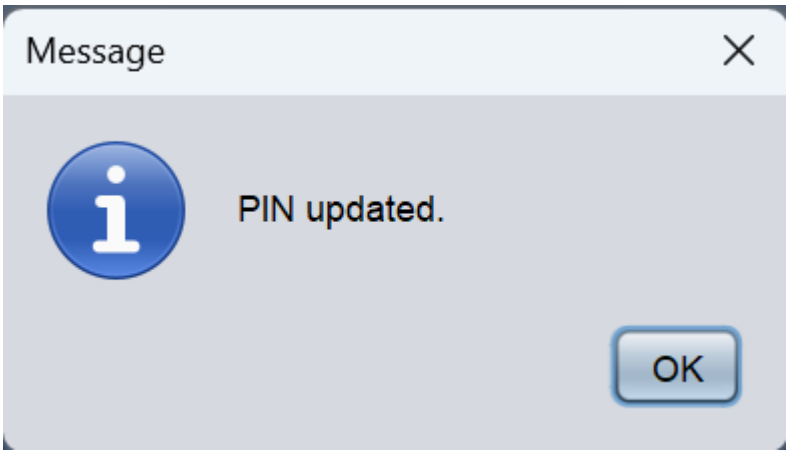
23. This is the example pdf of the Mini Statement that had been saved. (after clicking the **“print”** button).



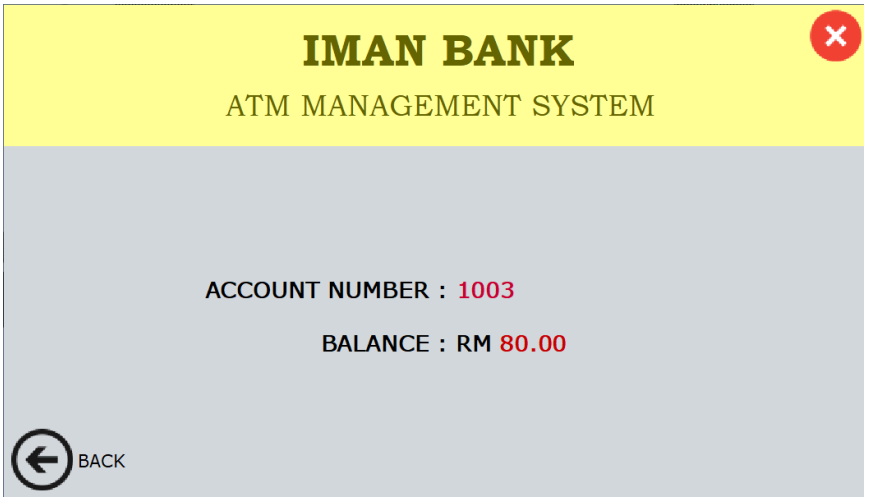
24. In the Change PIN section, users can change their PIN by entering the new PIN.



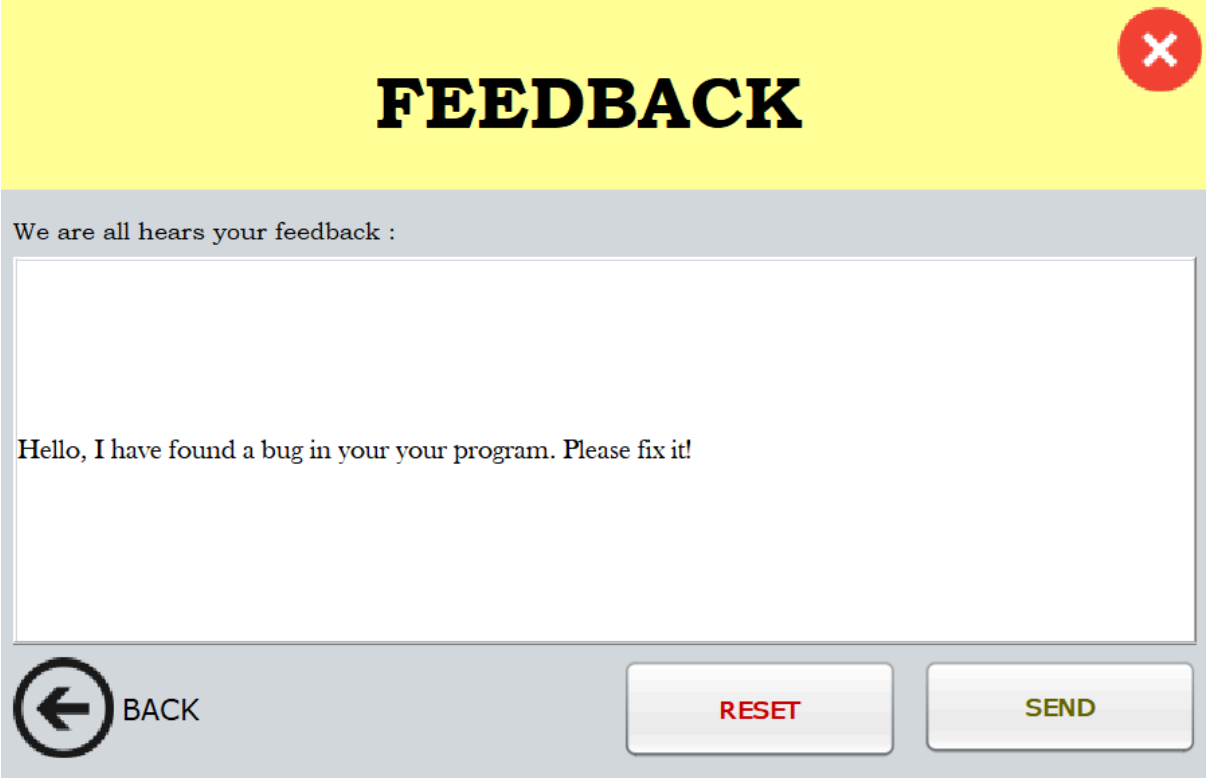
25. Users will see this message pop up after successfully changing their PIN.



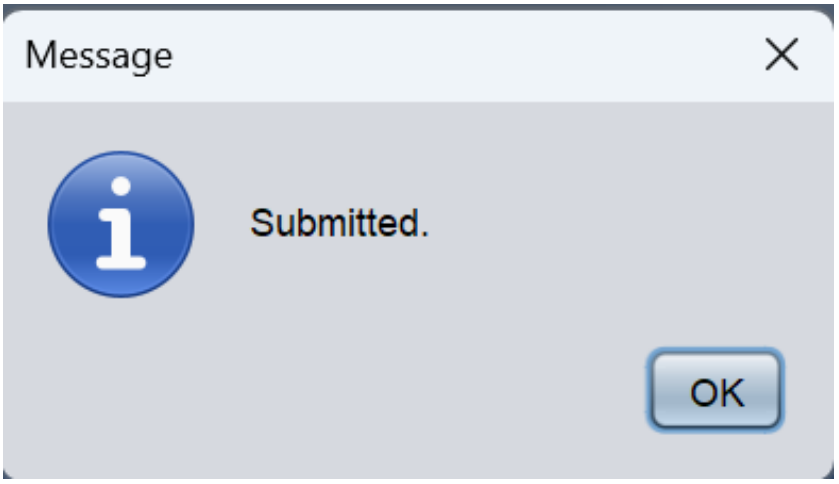
26. In the Balance section, users can check their account balance by clicking on the balance button in the main menu.



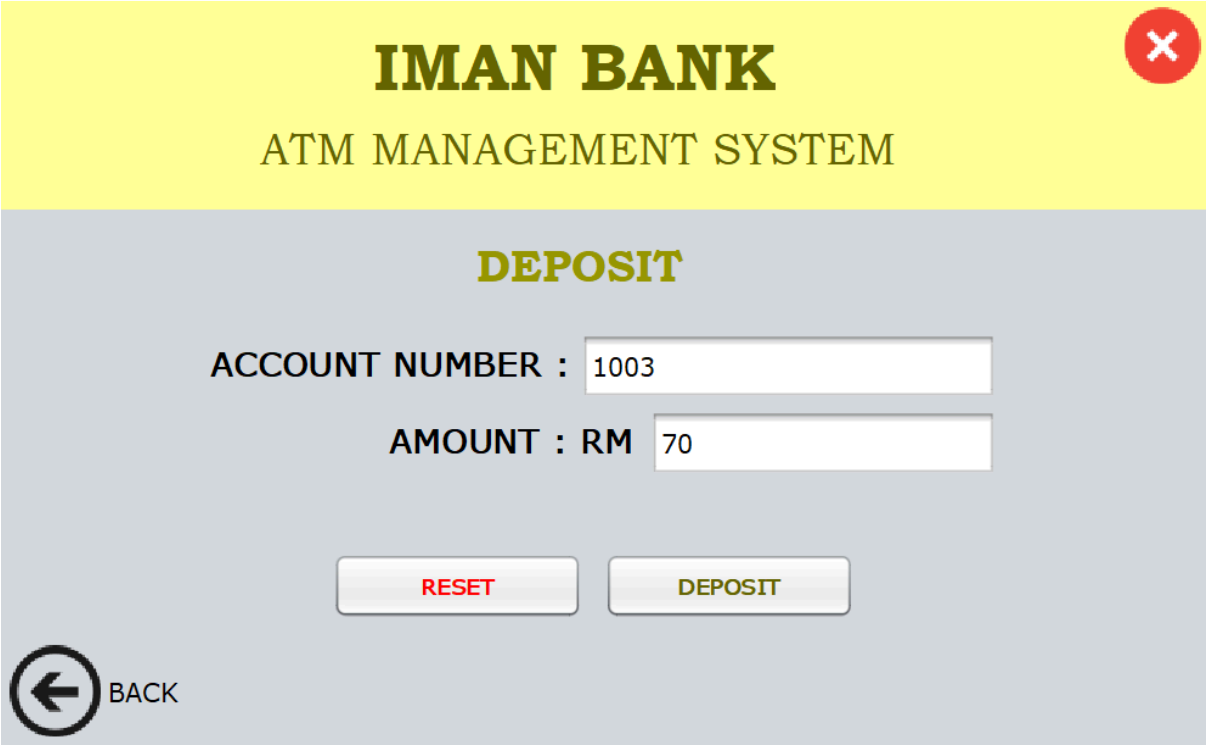
27. In the Feedback section, users also can write their feedback by clicking on the feedback button in the main menu.



28. This message will pop up after the user submits their feedback.

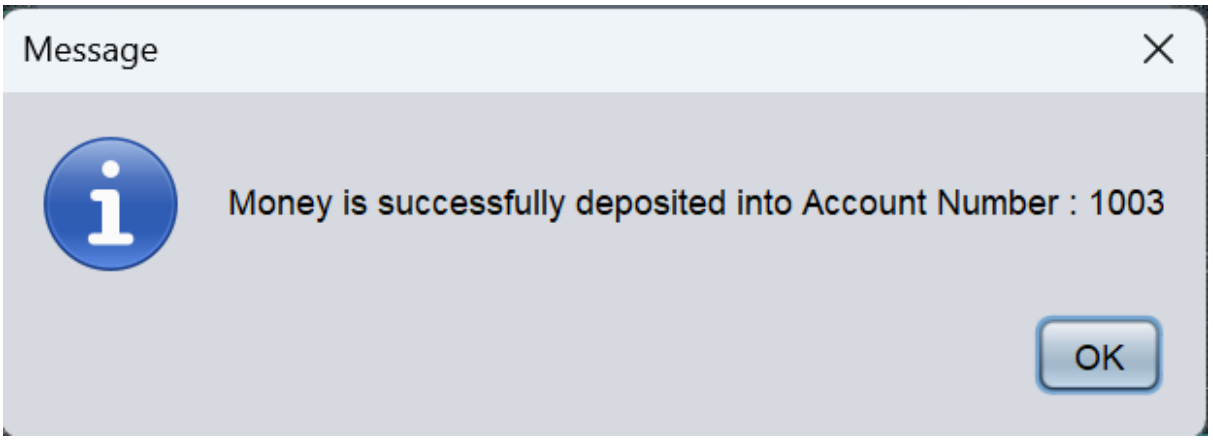


29. Users can deposit the money without having to log in to their account by clicking the deposit button on the main page of the system. Users need to enter the account number of the receiver and the amount.

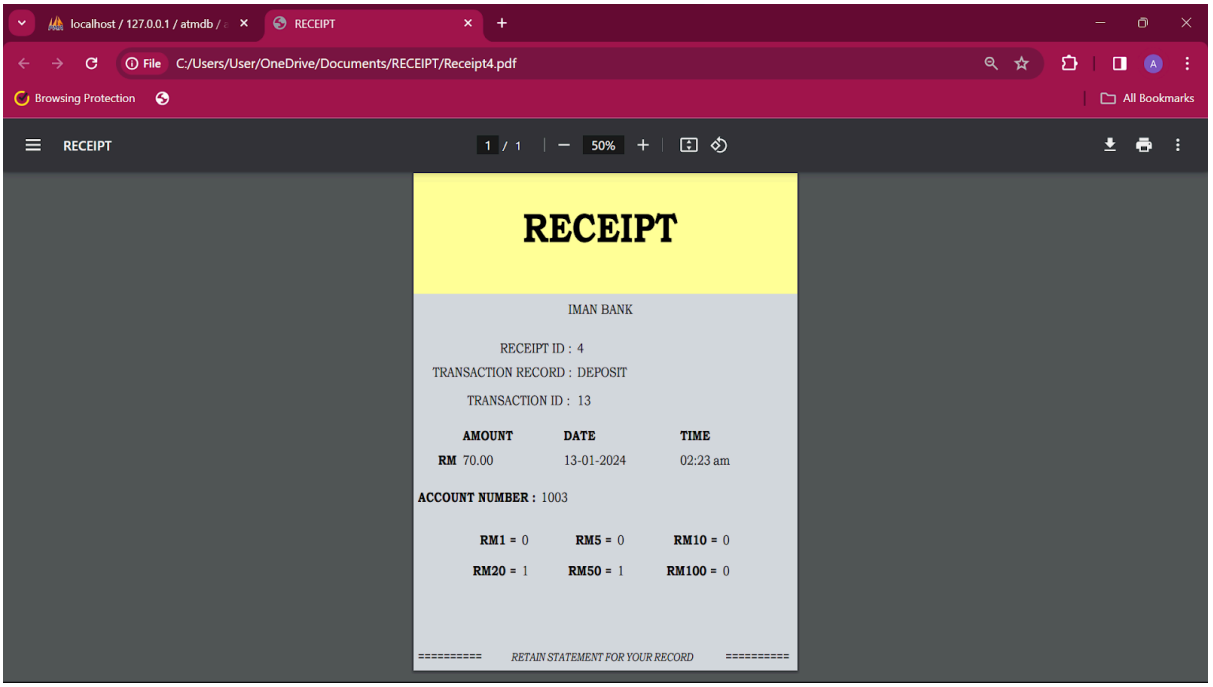


30. Users can see the information of the receiver, and they need to check carefully before confirming the transaction.

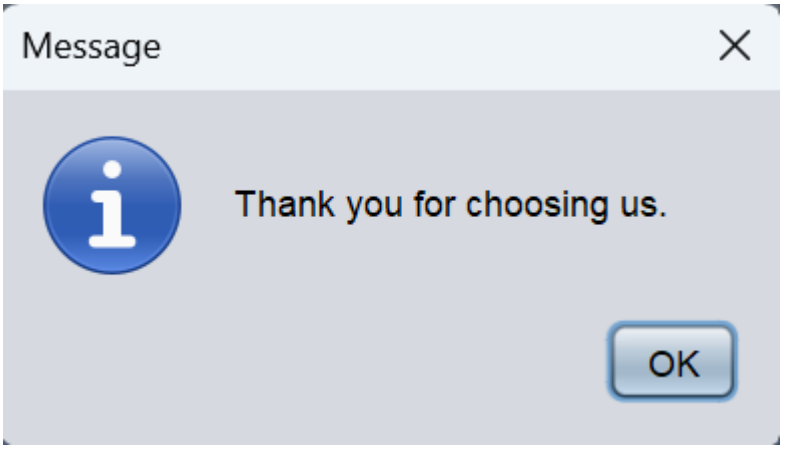
31. Users can see the message pop up after completing the deposit transaction.

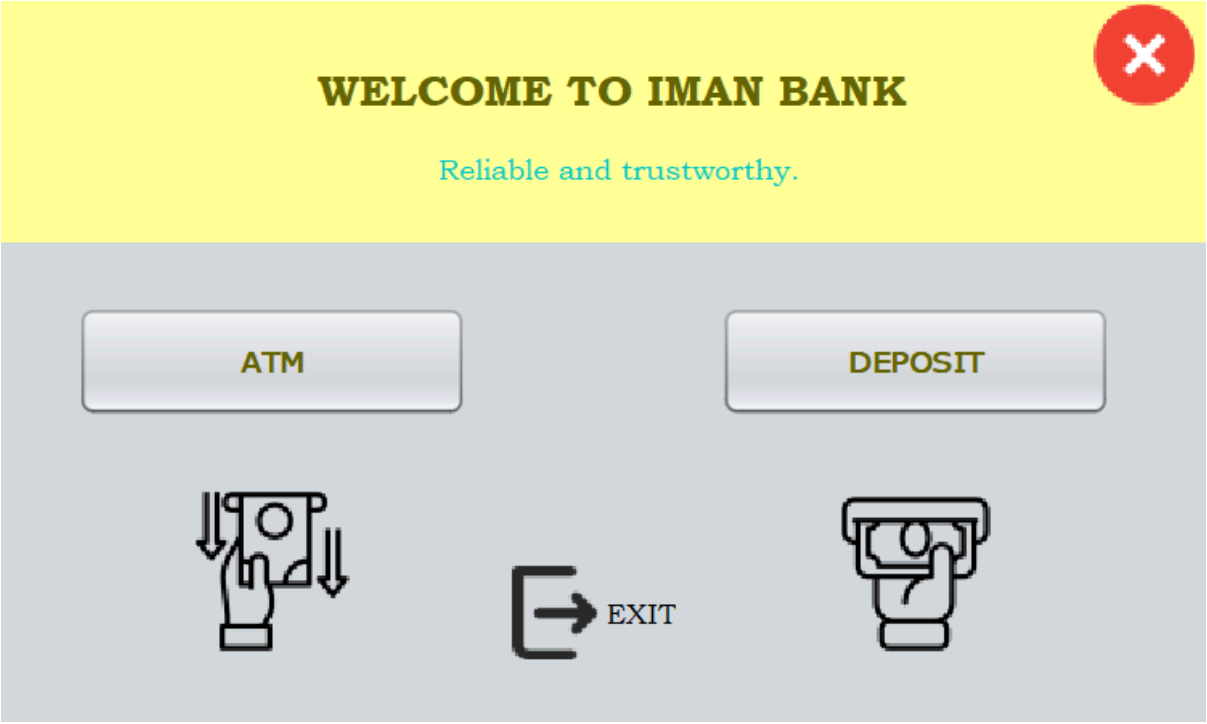


32. This is the example pdf of the deposit transaction to the other account that had been saved.



33. This message will pop up after the user finishes their transaction.





34. After the deposit transaction is finished, the system will be back on the main page.
